Side is structure/land interface. Land seems fairly heavily vegetated, a lot of light & dark contrasts, give an almost of tropical forests. Moisture present. Terrain seems relatively level but with some significant elevation changes.

Structure is tapered/slanted; flat; wavy/cement, very fast, wide, -almost washing in ~~the~~ impact. Few people in relation to site as inside. Has a technical feel. Small rooms predominate inside. Ladders & railings on roof, w/other objects which seem to be "instruments." Sense of a large irregular current "patterned" object, which may be part of the (outside) wall; large; flat black on inside. A tingling/prickly sensation is associated with this "pattern," but may not be always present. It may be active or passive, is presently passive, but fulfills an assigned purpose even when passive.
